

Original by VingCard

When VingCard introduced the world's first recodable mechanical cardlock system in 1979, the results were outstanding. For the first time, hotel locks could be recoded for each new guest – or whenever a keycard was lost – with minimal time and effort. The only cost was a few pennies worth of plastic. This development changed the face of hotel security and created an entire new industry.

Since then, the reliability of the system has been proven again and again in thousands of hotel rooms around the world.

The invention that created an industry

VingCard is the world leading manufacturer of card operated locking systems for the hotel and cruise industry. Nearly 3 million locks are installed in properties in 137 countries. VingCard's operation also comprises Elsafe International a.s, the internationally renowned in-room safe manufacturer. The companies' international network consists of 12 subsidiaries and another 75 distributors.

VingCard is part of the ASSA ABLOY Group, the world's leading manufacturer and supplier of locks and associated products, dedicated to satisfying end-user needs for security, safety and convenience.

The invention that created an industry

VingCard recognizes the fact that the latest, most advanced technology is not always necessary or appropriate for every property. Many small hotels and inns simply need a low cost alternative to the traditional metal key. The ideal solution for these properties would allow locks to be easily and quickly recoded whenever a guest key is lost, without replacing cylinders or buying expensive new metal keys. VingCard's Original Series Locks are such a solution.

The Original Series was created with the same high quality mechanical design and advanced engineering as VingCard's most advanced electronic system locks. The Original locks, however, are designed to be recoded manually, rather than requiring electronic equipment to perform the same function. To create a new key, just insert a new code card into a special coding compartment on the lock. It's that simple.

No batteries, electronic components or computers are required. The Original Series also eliminates the need for special wiring and front desk equipment. Just simplicity, security and peace of mind. What could be easier?

High quality mechanical locks

The 'Original' product line is based on VingCard's high quality mechanical lock. These locks are all equipped with a thumbturn-operated deadbolt and a 'panic release' which unlocks and opens the door from the inside with a single action.

The locks are built especially for hotel use and are available in a wide range of attractive styles and finishes. This variety allows you to match the appearance of your locks with the style and interior decor of your property. The locks are reinforced by steel plates and comes with solid brass handles.

Recodable cylinders for staff access

An integral part of the Original lock design is VingCard's high quality, pick-resistant cylinder. This provides separate emergency, master, and sub-master keys, with full deadbolt override on emergency and master levels. Re-coding of the cylinder is done from the outside of the lock using a 're-code only' key.

How Original works

Guests are issued plastic keycards, while staff members still use conventional metal keys. The guest cards are pre-punched with one of over 4 billion possible combinations of holes. Each guest card matches up to the corresponding code card that is loaded into a special coding unit in the lock. When a guest-card is lost, the lock may be re-coded in seconds by inserting a new code card into the code slot located on the inside of the door. The re-coding process is quick and efficient, reducing inconvenience for both the staff and guest.

Masterlevels

Despite their simplicity, Original locks still offer the opportunity to design an effective multi-level master key system for staff use. This can either be based on traditional metal keys or plastic keycards. The Original system allows multiple levels of master access, making it easy to control access by various groups of employees to designated blocks of rooms.

Locks recoded in seconds

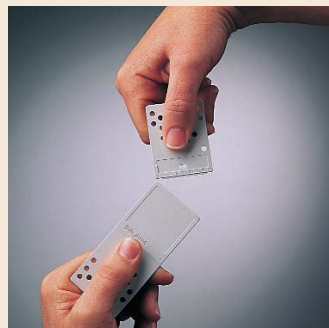

Four simple steps to re-code an Original lock and lock out previous guests:

Step 1.
Open the door with a service key and open the code lid on the inside with a special tool

Step 2.
Remove the old code card from the coding compartment

Step 3.
Divide a new keycard set into a code card and a keycard

Step 4.
Insert the new code card and close the compartment lid

Accessories

by VingCard

VingCard's total property solutions are designed to meet all your security hardware needs. You can continue the innovative VingCard design throughout your property with additional hardware in the same style and finish as your VingCard guestroom locks.

KEYCARDS

by VingCard

The locks are operated by low cost keycards supplied pre-punched with one of more than 4 billion combinations. Thus keys may be replaced at just a fraction of the cost of traditional metal keys. KEYCARDS by VingCard is your guarantee for quality – in manufacturing and in usage.

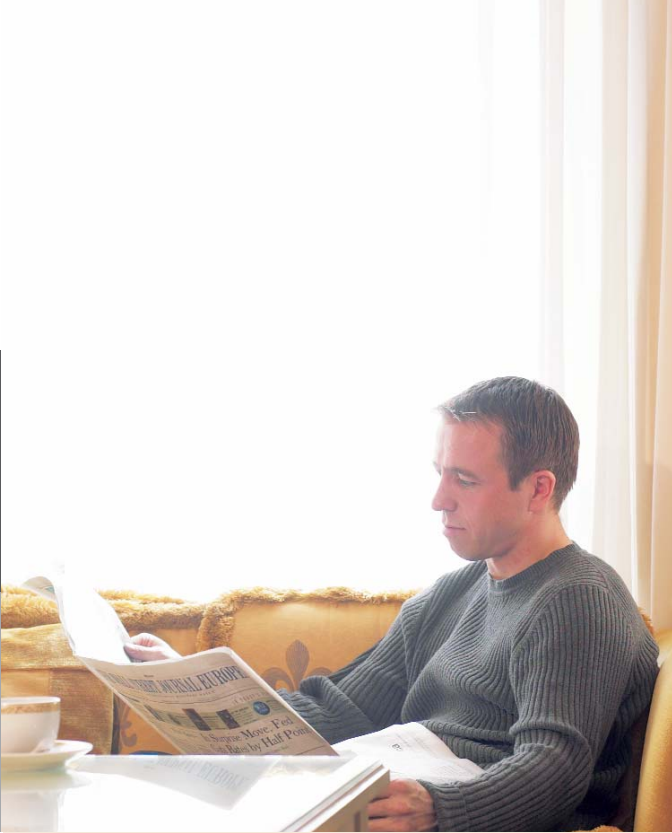

SERVICE

by VingCard

Your hotel never closes - so neither do we!

VingCard's sales and service support organization spans the globe. The company philosophy has always been to sell locally, and to provide local after-sales support. Currently, the company has a network of offices and distribution companies providing local service and support in more than 80 countries worldwide. VingCard local sales and support companies offer a wealth of hotel industry experience, technical and security advice, training, installation, and access to a full range of parts.

Since we are staunchly committed to a partnership with our customers in the hotel industry, we operate 24 hours a day, 365 days a year. Technical support is always on hand to answer any questions you may have.

FEATURES

BENEFITS

High quality brass escutcheon reinforced by a steel plate

Advanced & patented cylinder technology and fastening method

Wide range of alternative finishes and handles

3 hour UL fire rating

Full 1 inch/2,54cm dead bolt and anti-pick latch

Occupancy indicator

Single action release – dead bolt/latch are retracted together by inside handle

Self lubricating, long life handle bearings

ANSI & EURO lockcases available

No batteries

No front desk equipment or computers

No wiring

Plastic keycard for guests

Keycards supplied pre-punched ready to use

Durable finish

Physical and mechanical strength and durability

Eliminates return thefts, cylinder tampering & unauthorized key cutting

Better fit between aesthetics

The locks satisfy the most stringent fire standards

Added security and guest protection. Impossible to prise open

Added guest privacy

Exit made easy for guests in emergency situations (no need for fumbling with keys or thumb turns to open the door)

Returns handle firmly to horizontal position and ensures lifetime of more than 1,2 million openings

Offers great flexibility with regard to local requirements

Low operating costs

No PC system investments. Easy to learn & operate. Ultra reliable

Easy to install

Keys can be replaced at a fraction of the cost of a traditional metal key

Extremely easy to re-code the locks

Since pioneering the hotel card lock industry more than 20 years ago, VingCard has supplied nearly 50% of the total installed base of hotel card locks around the globe. That's more than 3 million locks in 137 countries! By purchasing VingCard products, you'll get the added peace of mind that comes with working with the worldwide market leader. As a dedicated part of your security team, VingCard is committed to your locking system products 24 hours a day, 365 days a year.
